Pastabos

A mandrake is the root of a plant, historically derived either from plants of the genus *Mandragora*. Because mandrakes contain deliriant hallucinogenic tropane alkaloids and the shape of their roots often resembles human figures, they have been associated with a variety of superstitious practices throughout history. They have long been used in magic rituals, today also in contemporary pagan traditions such as Wicca and Odinism.

In the past, mandrake was often made into amulets which were believed to bring good fortune, cure sterility, etc. In one superstition, people who pull up this root will be condemned to hell, and the mandrake root would scream as it was pulled from the ground, killing anyone who heard it.
